ShiftWizard Support FAQs

ShiftWizard Support Just Got Better

Beginning June 1, 2023, you may notice some changes to the ShiftWizard support process

ShiftWizard support is moving away from ZenDesk and taking advantage of the enterprise Salesforce platform within HealthStream.

This process will be seamless for the end user, as entering your Support Request within ShiftWizard will remain the same. We will manage these cases in Salesforce and still provide you with a confirmation email and case number to manage your requests.

FAQs

Will I still enter Support tickets (cases) through the ShiftWizard platform?

Answer: Yes! Support cases should always be entered through the ShiftWizard platform, the same as you enter them today. You will still go under "Help" on the menu bar and select "Request Support" to enter your case. It will be the same form you use to submit today.

Is the support form on the ShiftWizard platform changing?

Answer: No, the form is the same. Continue to enter support cases using the support form on the ShiftWizard platform. You will still receive a confirmation email with your case number and validation your request has been submitted to the ShiftWizard support team.

Now that ShiftWizard is part of the HealthStream family of products, is my support team changing?

Answer: No, the same group of talented Customer Support Specialists will continue to handle your support needs.

It sounds like things are remaining the same for the most part. What is changing?

Answer: The main change will be the way in which Admins view their own submitted support cases as well as the cases opened at their facility. To better serve our customers, we are offering a login specifically for ShiftWizard Administrators to manage their cases in a more centralized approach. There is a new process to submit for a unique UserID for the Salesforce Customer Portal that allows you to view "My Cases" as well as all cases entered for your Facility/Facilities. Please reach out to Customer Support to take advantage of this enhanced feature.
